Are you tired of waiting on traditional wireline providers for last mile access or metro point-to-point circuits? Do you want the ability to easily upgrade your bandwidth without the hassels of equipment upgrades and installation headaches? Brown Dog Networks service leverages the latest fixed-wireless technology to deliver private line services quickly, even in crowded metropolitan areas. We offer high-bandwidth service from 1 Mbps up to GigE speeds.

Cost of Service

Moving to a fixed wireless solution from Brown Dog Networks saves a tremendous amount of money in local loop charges alone. With a conventional telco T1, the cost for local loop can be as much as \$200-\$800 per month not including bandwidth charges from your ISP. Our wireless solution eliminates the telco completely saving you money from the start.

Speed of Delivery

Installation of the circuit can be done typically within 5 business days! Compare that to the typical 45 day wait for a traditional circuit.

Scalability and Flexibility

Outgrowing your circuit can be a problem in the traditional sense that adding more bandwidth can take time. With Brown Dog Networks seamless upgrades are available at any time with the same equipment. DIA or Office Interconnectivity Whether you are in need of Dedicated Internet Access, Office Interconnectivity, MPLS, or a secure offsite backup our solutions can meet your demands. We offer dedicated internet access with a variety of solutions to suit the needs from small businesses to large corporations.
